ABSTRACT

As part of the Master Plan data gathering process, Florida's Follisecondary Education Planning Commission requested that the state Board of Community Colleges (SBCC) develop estimates of Associate of Art (AA) graduation rate and student transfer rate from the Community College System (CCS) to the State University System (SUS). The SBCC developed a cohort for this purpose that was defined as the fall 1991 first-time-in-college students who had an initial intent of pursuing the AA degree, had a final college assigned program code of AA, and had complete Entry Level Placement Test scores on the fall 1991 Student Data Base. The system-level results were a 24% AA graduation rate and a 26% transfer rate. The next step was to divide the cohort into groups based upon the results of the Entry Level Placement Test. There was a direct relation between the number of subtests failed and the AA graduation and transfer rates. A third aspect of this study was to define a cohort of students who would have been able to start their collegiate careers in the SUS, but entered the CCS instead. There is a direct relationship between SAT scores as grouped for this study and degrees earned and transfers. Finally, this study looks at the relationship between the areas failed and graduation and transfer rates. Based upon this cohort, it would appear that concentrating on improving mathematical skills would produce the largest increases in graduation and transfer rates. (VWC)

GRADUATION AND TRANSFER RATE BY ELT STATUS

As part of the Master Plan data gathering process, the Postsecondary Education Planning Commission requested that the State Board of Community Colleges develop estimates of AA graduation rate and student transfer rate from the Community College System (CCS) to the State University System (SUS). The SBCC developed a cohort for this purpose that was defined as the fall 1991 first-time-in-college students who had an initial intent of pursuing the AA degree, had a final college assigned program code of AA, and had complete Entry Level Placement Test scores on the fall 1991 Student Data Base. This cohort was then tracked through the 1995-96 reporting year in both the CCS and SUS. The system level results were a twenty-four percent (24%) AA graduation rate and a twenty-six percent (26%) transfer rate. The transfer rate is based upon all students transferring and includes persons without any award (8%) as well as those with the AA degree (18%). This transfer rate compares favorably with the data from the National Transfer Rate study conducted by the Center for the Study of Community Colleges. The Center reports a transfer rate of twenty-two percent (22%) based upon students who earned at least 12 hours. The SBCC cohort used entrance into the AA program as its main characteristic and did not contain any "hours earned" criteria.

The next step was to divide the cohort into groups based upon the results of the Entry Level Placement Test. A student was assigned to one of four categories defined as Group 0 - failed no subtests and was therefore assumed to be college ready, Group 1 - failed one subtest, Group 2 - failed two subtests, and Group 3 - failed all three subtests. The emphasis for this part of the study was the issue of readiness and thus no attempt was made to differentiate between subtest areas. As expected there was a direct relation between the number of subtests failed and the AA graduation and transfer rates. Group 0 had a graduation rate of thirty-five percent (35%) and a transfer rate of thirty-six percent (36%). Group 1 had rates of twenty (20%) and twenty-two (22%) percent for these same two measures. The rates for Group 2 were thirteen (13%) and seventeen (17%), while Group 3 had rates of five (5%) and nine (9%). The transfer rate of AA degree recipients was also calculated. This was the most consistent rate in the entire study. Seventy-five percent (75%) of AA degree holders in Group 0, Group 1 and Group 2 transferred, as did seventy-two percent (72%) of degree holders in Group 3.

A third aspect of this study was to define a cohort of students who would have been able to start their collegiate careers in the SUS, but entered the CCS instead. Since the CCS does not collect high school course data, SAT scores were used as a surrogate for meeting all SUS entrance requirements. Only eighteen percent of the original cohort had SAT scores as their ELT score, but due to the problems inherent in using concordance tables, no attempt was made to convert any other ELT results to SAT scores. The SAT scores are from fall 1991 and thus, are not recentered. Again, there is a direct relationship between SAT scores as grouped for this study and degrees earned and transfers. The High SAT group - defined as scores from 1000 to 1600 - had a graduation rate of forty-one percent (41%) and a transfer rate of forty-eight percent (48%). The Medium SAT group - defined as scores from 800 to 999 had rates of forty-one (41%) and forty-three percent (43%). The Low SAT group - defined as scores from 400 to 799 - had rates of

twenty-four percent (24%) and twenty-seven percent (27%). Overall, the students presenting SAT results as their ELT scores had higher graduation (35% and transfer rates (38%) than did the cohort as a whole. They also had a higher rate (11%) of persons without an award transferring. This is not surprising since the SUS requires either the SAT or ACT for entry and thus it seems logical to assume a higher proportion of this set of students had considered attending the SUS than of the total cohort.

The final phase of this study was to look at the relationship between the areas failed and graduation and transfer rates. For this, Group 1 and Group 2 from the full cohort were divided into those students failing only reading, writing, or math (Group 1); and those failing reading and writing, writing and math, or reading and math. The results were the same for both groups. For those students failing only one subtest, failing reading had the least impact on graduation and transfer rates with writing second and math the greatest. For those failing two subtests, failing reading and writing had the least impact, with reading and math second, and writing and math the greatest. Based upon this cohort, it would appear concentrating on improving mathematical skills would produce the largest increases in graduation and transfer rates.

REPRODUCTION RELEASE

(Specific Document)

1	DOC	IMENT	IDENTIE	ICATION:
B _	11/1/4	LIVIE IN A		

Title: Graduation and Transfer Rate by ELT Status	·
Author(s): Patricia Windham, Phd	
Corporate Source: Florida Community College System State Board of Community Colleges	Publication Date: May 27, 1997

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system. Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic/optical media, and sold through the ERIC Document Reproduction Service (EDRS) or other ERIC vendors. Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following two options and sign at the bottom of the page.

Check here For Level 1 Release: Permitting reproduction in microfiche (4° x 6° film) or other ERIC archival media (e.g., electronic or optical) and paper copy.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

The sample sticker shown below will be affixed to all Level 2 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN OTHER THAN PAPER COPY HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

Check here For Level 2 Release: Permitting reproduction in microfiche (4° x 6° film) or other ERIC archival media (e.g., electronic or optical), but not in paper copy.

Level 1

Level 2

Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but neither box is checked, documents will be processed at Level 1.

"I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche or electronic/optical media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

II. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
